

Sri Lanka CERT (Pvt) Ltd

Procurement of Supply and Implementation of WIFI solution for Sri Lanka CERT [IFB No: CERT/GOSL/GOODS/NCB/2024/15]

WiFi Solution clarification requested:

SL CERT Clarifications - Wireless Controller

Clause on RFP	Description on RFP	Clarification Requirement	Answer
14 RF Management	The system should enforce wireless clients through a role based access that can directly integrate with the roles defined Within existing authentication servers.	What are the authentication servers?	Microsoft Active Directory
17 RF Management	The system should support scalable to add more channels thereby increasing the capacity of proposed WLAN setup.	Please clarify requirement	should be designed in such a way that it can expand by adding more communication channels, which will allow it to support more users and devices efficiently over time.
18 Integration	The appliance should support Active Directory and RADIUS/AAA based authentication, internal user/password database as well as external LDAP.	Please specify which authentication service is running on the network for network authentication.	Microsoft Active Directory
32 Security	The system should be able to blacklist wireless devices after firewall/ACL access rule violations are detected. The	Statement unclear. Please clarify further or is there a typo?	There is a typo.

	system should provide attack signatures based on wireless Vulnerability and exploits database signatures and provide attack alerts which include a link to WVE entry for the attack.		The system should be able to blacklist wireless devices after firewall/ACL access rule violations are detected. The system should provide attack signatures based on wireless Vulnerability and exploits database signatures and provide attack alerts which include a link to WAVE entry for the attack.
