Bidders must state their compliance to specifications/requirements against each and every criterion of the specification sheets. Incomplete/Non-Comply specifications sheets will lead to the disqualification of the bidder.

Proposed Product Name			
Proposed Product Version / Release			
Proposed Product SKU / Subscription Model			
#	**Minimum Service Requirement**	**Bidder's Offer**	
		Yes/ No	**If No Indicate Your Offer**
1	Subscription period shall be a minimum of two (02) years.		
2	The quoted subscription shall include all software components, scanning engines, application security management capabilities, connectors, integrations, workflow functions, and reporting capabilities required to meet this specification, without separate licensing for core capabilities.		
3	Subscription shall include current product releases, security updates, maintained vulnerability detection content, threat intelligence, runtime intelligence enhancements, and applicable feature updates throughout the subscription term.		
4	The solution shall support security testing of a minimum of fifty (50) unique web application URLs per subscription year**.**		
5	The solution shall provide Dynamic Application Security Testing (DAST) of running web applications, with emphasis on identifying vulnerabilities that are reachable and exploitable in the deployed application.		
6	The solution shall support authenticated web application testing, including automated handling of authentication, login workflows, session establishment, and protected application areas.		
7	The solution shall support testing of modern and dynamic web applications, including client-side behavior, dynamic content, multi-step workflows, stateful interactions, and authenticated application processes.		
8	The solution shall detect common and high-risk web application vulnerabilities, including injection vulnerabilities, cross-site scripting, authentication weaknesses, authorization weaknesses, insecure session handling, access-control flaws, and other exploitable runtime vulnerabilities.		
9	The solution shall provide proof-based scanning or equivalent technical validation of identified vulnerabilities, including evidence demonstrating exploitability or impact where technically possible.		

10	The solution shall provide runtime validation of identified vulnerabilities to distinguish exploitable or verified vulnerabilities from findings that cannot be technically validated.		
11	The solution shall provide API security testing for REST, GraphQL, and SOAP APIs, covering both documented and discovered API attack surfaces.		
12	The solution shall support API testing using supplied API definitions and schemas, including OpenAPI/Swagger, Postman, WSDL, GraphQL schemas, and equivalent supported formats.		
13	The solution shall provide automatic API discovery and, where technically supported, reconstruction or inference of API specifications from discovered application behavior.		
14	The solution shall identify API authentication, authorization, input-validation, data-exposure, and business-logic weaknesses, including broken object-level authorization and broken function-level authorization where technically detectable.		
15	The solution shall support stateful API security testing, including testing of multi-step API workflows and dependencies between API requests where required to identify vulnerabilities that cannot be detected through isolated requests.		
16	The solution shall correlate API vulnerabilities with the relevant application, endpoint, request, response, authentication context, and technical evidence to support investigation and remediation.		
17	The solution shall provide multilayer discovery of web applications and APIs, including discovery of previously unidentified or undocumented attack surfaces where technically supported.		
18	The solution shall allow centralized management of multiple applications, environments, projects, APIs, web assets, and related application assets.		
19	The solution shall support continuous discovery of newly identified web applications and APIs where technically supported.		
20	Where LLM-based functionality, AI agents, or AI-enabled application interfaces are deployed within the organization's web or API attack surface, the solution shall support security testing of relevant LLM/AI application interactions and associated attack surfaces.		
21	The solution shall provide security findings and technical evidence for supported LLM security tests in a manner consistent with the vulnerability management and reporting capabilities of the platform.		
22	The solution shall prioritize vulnerabilities based on severity, exploitability, affected asset, application context, reachability, and other relevant security risk factors.		
23	The solution shall provide intelligent risk prioritization and noise reduction, including AI-assisted or equivalent		

	capabilities, to identify findings requiring remediation and reduce duplicate or lower-value alerts.		
24	The solution shall support centralized management of identified vulnerabilities, including assignment, tracking, verification, closure, evidence retention, and remediation history.		
25	The solution shall support scheduled, on-demand, continuous, and event-triggered scanning of registered web applications and APIs.		
26	The solution shall integrate with CI/CD pipelines and provide command-line, API, webhook, or equivalent automation mechanisms for triggering web application and API security testing.		
27	The solution shall support configurable security gates, thresholds, policies, suppression rules, and equivalent controls for determining whether identified vulnerabilities should affect application delivery workflows.		
28	The solution shall provide documented REST APIs, webhooks, connectors, command-line interfaces, or equivalent interfaces for scan control, application/API discovery, finding exchange, and workflow automation.		
29	The solution shall provide dashboards covering application and API security posture, verified vulnerability status, severity, exploitability, risk prioritization, remediation status, and affected asset context.		
30	The solution shall provide historical visibility and trend analysis for web application and API security findings, verified risk, remediation progress, recurring vulnerabilities, and security posture over time.		
31	The solution shall provide technical and management reporting for identified vulnerabilities, verified risk, remediation status, trends, and security program performance.		
32	The solution shall support Single Sign-On (SSO) using supported enterprise identity providers and authentication standards.		
33	The solution shall support role-based access control with configurable roles and permissions for security, development, operations, and management users.		
34	The solution shall maintain auditability of user access, security testing activities, scan configuration changes, findings, evidence, workflow actions, and administrative changes.		
35	The solution shall protect communications between platform components and supported integrations using secure transport, including TLS 1.2 or higher.		
36	The subscription shall include current product releases, security updates, maintained vulnerability detection content, threat intelligence, runtime validation enhancements, and applicable feature updates throughout the subscription term.		

37	The solution shall provide cloud-hosted deployment or an equivalent enterprise deployment model suitable for secure web application and API testing.		
38	The bidder shall identify any deployment, infrastructure, browser, authentication, API, URL, scan-volume, concurrency, or feature limitations applicable to the proposed subscription.
